

A biotechnological innovation to reduce excessive ammonia in water by converting ammonia to nitrites to nitrate. It reduces hydrogen sulphide gas in water. It helps in balancing pH at optimum level. AZOBIND helps to biodegrade variety of the accumulated organic load at the pond bottom and removes through a continuous mineralization process in a systematic way and releases nutrients into the pond environment. AZOBIND helps in stabilizing the pH bloom till the end of culture period which provides good harvest.

COMPOSITION:
Combination of bioremediation bacteria to reduce ammonia and hydrogen sulphide.

BENEFITS:

- Offers sustainable control over production of harmful gases like ammonia and hydrogen sulphide.
- Accelerates the breakdown of organic waste.
- Post application of AZOBIND POWDER (PACK-I) prevents the growth of pathogenic microorganisms and checks secondary infection in shrimp and fish.
- Sequential application keeps check on production of ammonia and hydrogen sulphide gas formation.
- Enhance the intestinal enzyme system acts as natural growth promoter.

TARGET AQUACULTURE: Fishes & Shrimps

USAGE INDICATION:
While aquaculture pond water becomes Nitric due to high degree of organic wastes as well as production of obnoxious gases.

USAGE INSTRUCTION: Day-1: apply AZOBIND POWDER (PACK-I) @ 2.5 kg per acre of water (3-4 feet water depth). The dose may vary depending on stocking density, depth of the water and water condition.
Day-2: apply AZOBIND TABLET @ 300 gm per acre of water or as directed by fishery experts

WITHDRAWAL PERIOD: Nil

SPECIAL INSTRUCTION: Store in a cool and dry place.

100g

AZOBIND™

TABLET

**Bioremediation formula
to reduce obnoxious
gases in water**

PACK - II

PRECAUTION:
Keep container closed when not in use. Avoid contact of with eyes. Flush immediately with clean water if contacted.

NOT FOR HUMAN USE	This is free from antibiotic, antidote, antidrug, ampicillin & GMO
NOT FOR MEDICINAL PURPOSE	
ANIMAL FEED SUPPLEMENT
